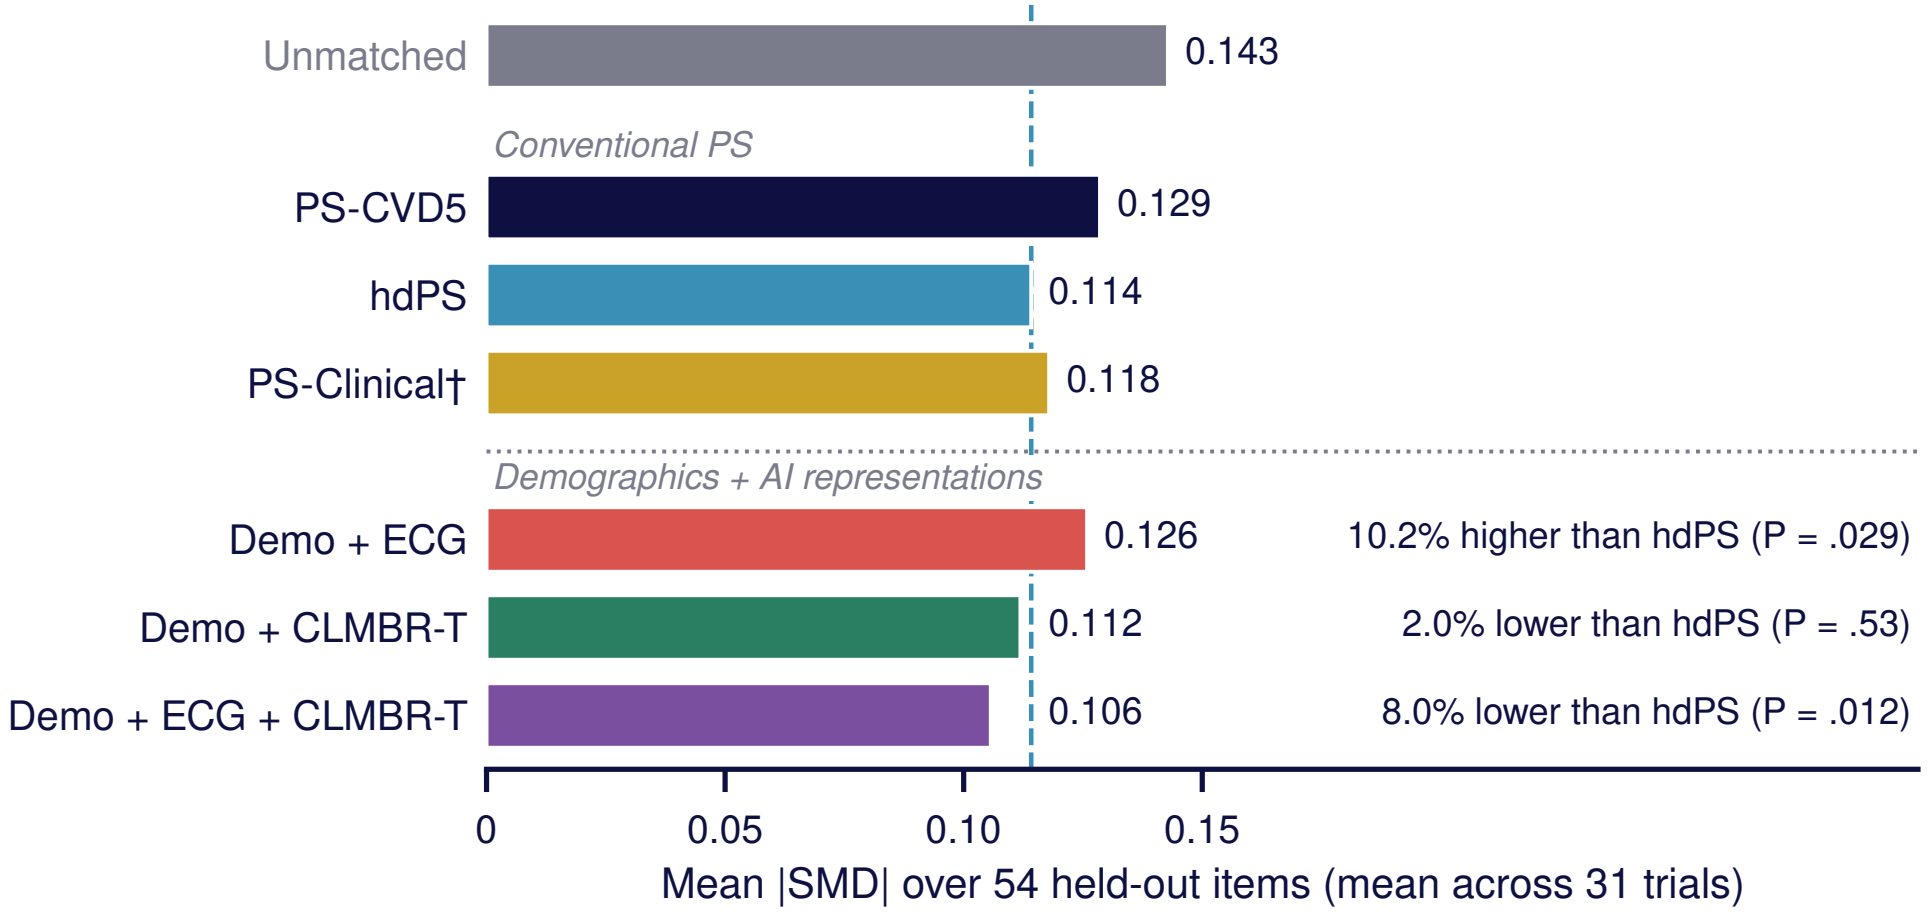
D Overall balance: AI representations vs conventional PS



Demo = age, sex, index year; ECG = 32 PCs of the pre-index ECG embedding; CLMBR-T = 64 PCs of a foundation-model embedding of the coded pre-index EHR. Labels: paired differences vs hdPS over items observed in both arms; two-sided sign-flip P across 31 trials, unadjusted. † PS-Clinical on the ~45 items that are not its inputs.
